

## ELECTRONIC MULTI-FUNCTION CONTROL FOR "COMBO" AIR HANDLERS

**NEW**

R200 is a microprocessor based control for operating a Combo air handler. It provides control for a two speed line voltage fan motor or low voltage control of an ECM motor, line voltage control of a water pump, 24VAC control of an isolation valve and control of a dry switching relay to turn on/off a water heater.

### FEATURES:

1. Pump timer - Activates pump four times daily eliminating stagnant water in hot water coil.
2. 24 VAC isolation valve control - allows for zoning control.
3. Auxiliary contacts for water heater or boiler activation.
4. Freeze protection input.
5. Thermostat connections.
6. Adjustable time delay for blower activation.
7. Aqua-stat time delay for blower activation.

Jumper selection for Hot Water or Electric Heat. In Electric Heat, fan continues to operate as long as heater sequencer is on.
